Runs on your machine · nothing leaves it

Ask your lectures.

HadeS turns a recorded course into something you can talk to. Every answer comes from what your teacher actually said — **and points at the minute it happens.**

What it is

A study companion for recorded lectures. It learns a course once, then answers questions **from that course only**, with the lesson and timestamp behind every reply.

Who it's for

Students sitting on hours of class recordings — and anyone who has tried to find **one explanation** inside a three-hour video.

Why it exists

Re-watching to locate a single moment spends the time the lecture already spent. HadeS gives the moment back in seconds, **without sending your course anywhere.**

How a question travels

1 Ask anything → **2 Find the exact lesson** → **3 Answer with the minute** → **4 Play the moment**

Type the question the way you would ask a friend — no keywords, no lecture number.

It reads across the whole course and picks the chapter that actually teaches this.

A plain-language answer, carrying the lesson and the time it came from.

The lecture opens inside the answer, already seeked to the second.

Grounded, never guessing

Why does `age = age + 1` work?

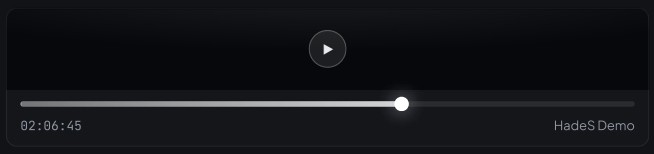

Assignment rebinds the name — **age** points at a new value; the old one is dropped.

★ Variables & assignment `01:01`

Also mentioned `00:39`

Answers are drawn from your course, and every one of them shows its sources — one main lesson, the rest marked as passing mentions.

The player lives in the answer

Tap a source and the lecture plays right there, seeked to the cited second — no hunting along a timeline.

Quiz yourself while it's fresh

Q1 What happens when you reassign a variable?

A Both values are kept automatically

B The name is rebound to the new value

C The old value is thrown away first

Correct — assignment moves the label, it never compares values.

Three questions drawn from the same lesson the answer came from, graded instantly with the one-line why.

Misses become review

Review · misses `study-guide.md`

- ✓ Reassignment rebinds the name
- ✓ A function without return gives back nothing
- ✓ f-strings format in place

Missed questions collect in the sidebar, and the whole session exports as a study guide you can revise from.

Real numbers from the live app — not mockups

Course material it holds

Full course	1,328
Demo course	611
Quantum	138

Lesson-sized pieces of the lectures it can answer from, per course.

How much lecture is inside

Full course	18h 00m
Demo course	5h 16m
Quantum	1h 36m

Three courses ship with it; any course folder can be added the same way.

Answers that hit the right lesson

11 of 11 test questions against the full 18-hour course landed on the exact chapter that teaches them.

Measured on this machine, offline: a full grounded answer in ~25 s, streaming word by word from the first second; a quiz in a few seconds.
